Science and Faith
An Exploration

The relationship between science and Christian faith shapes public policy on matters ranging from writing high school science textbooks to interpreting arctic sea ice melt. Over five sessions, this course will provide suggestions about how Christians can orient themselves to these discussions by exploring what the confession of God as Creator tells us about the world and our place in it, and what implications this has for how we receive and evaluate the claims of science.

- Session 1
- Session 2
- Session 3
- Session 4
- Session 5
Dr. Ian A. McFarland returned to Candler in 2019 after four years serving as Regius Professor of Divinity at the University of Cambridge. Prior to that, he was on the faculty at Candler from 2005–2015, where he was the inaugural holder of the Bishop Mack B. and Rose Stokes Chair of Theology and served as Associate Dean of Faculty and Academic Affairs. McFarland's research has focused on Christology, eschatology, theological anthropology, and the doctrine of creation. His interests also include the use of the Bible in theology, the relationship between theology and science, and the thought of Maximus the Confessor. McFarland is the sole author of six books and has edited or contributed to numerous other books and journals.

The Courses in Community program, hosted by the Candler Foundry, offers students in-depth learning opportunities situated at the intersection of the church and academy. Hosted in local congregations, these courses are open to both Candler students and community participants.
